Patterns

We feature patterns and bold designs on every batch of every product we make.

Novelty and variety are touchstones of the dialed in... gummies experience.

pattern usage

Patterns are used across most of our branding, on packaging, on social media posts, in print, and on our website.

They reinforce the feel of our brand and we prefer to use them when we can, unless we're making other specific design decisions.

successful patterns

...can be natural, organic, or random, but must be a vector shape.

...should have a moderate level of complexity and balance.

...use interesting blending and transparency combinations.

...balance their complexity with color (and chrome effects, on labels).

...are referential to media, art, culture, or design history.

pattern composition guide

An interesting pattern, but would be better if it were more complex.

Adequately complex, but would be better with differing contrast.

A successful base pattern, which can be further developed...

Base Pattern

Color Layer

Chrome Layer

By changing colors, adding blending and transparency, and altering the chrome (on labels).

Imagery

We use a variety of visual styles in our branding, but our images tend to capture our sense of whimsy, collaboration, community, and desire to make good things.

In lieu of specific style choices, we instead focus on good basics... high resolution images, no JPEG artifacting or blurriness, appropriate color correcting and grading, a sharp focus on the subject, good composition.
